Dart Programming Language

* String Buffer :-

Syntax :

```
void main() {
StringBuffer buffer = StringBuffer();
      or
var buffer= StringBuffer( );
print(buffer);
}
```

```
void main() {
String name = 'Coder';
name += ' ';
name += "Club";
name += " ";
name += "Bangla";
print(name);
}
```

```
name = name + ' ';
name = name + 'Club';
name = name + ' ';
name = name + 'Bangla';
```

'Coder Club Bangla'

* write()

```
void main() {
StringBuffer buffer = StringBuffer();
buffer.write("Coder");
buffer.write(" ");
buffer.write("Club");
buffer.write(" ");
buffer.write("Bangla");
print(buffer);
}
```

Coder Club Bangla

* writeLn()

```
void main() {
StringBuffer buffer = StringBuffer();
buffer.writeln("Apple");
```

```
buffer.writeLn("Banana");
buffer.writeLn("Mango");
  print(buffer);
}
```

// Apple
Banana
Mango

* WriteAll

```
void main(){
List<String> fruits = ["apple", "Banana", "Mango"];
StringBuffer buffer = StringBuffer();
buffer.writeAll(fruits);
  print(buffer);
}
```

appleBananaMango

```
buffer.writeAll(fruits, '-');
```

apple - Banana - Mango

Loop with StringBuffer :-

```
void main(){
StringBuffer buffer = StringBuffer();
for(int i = 1; i <= 5; i++){
  buffer.write('$i ');
}
print(buffer); //1 2 3 4 5
}
```

```
void main()
var buffer = StringBuffer();
for(int i = 1; i<=10; i++){
 buffer.writeLn("5 x $i =
        ${5 * i}");
}
print(buffer);
}
```

// 5x1 = 5
5x2 = 10

5x10 = 50 //

length

```
void main(){
var buffer = StringBuffer();
buffer.write("Hello Dart");
  print(buffer.length);
}
```

// 10

* isEmpty , isNotEmpty

```dart
void main() {
var buffer = StringBuffer();
print (buffer. isEmpty);
                               //true
buffer. write(" Dart");
print(buffer. isNotEmpty);
                               //true
}
```

* Clear()

```dart
void main() {
StringBuffer buffer = StringBuffer();
buffer. write ("Hello");
buffer. clear();
print (buffer);
}
```

* toString()

```dart
void main () {
String Buffer buffer = StringBuffer();
buffer. write ('Coder Club Bangla');
String result = buffer. toString();
print (result);
}                   // Coder Club Bangla
```

* HTML

```dart
void main () {
String Buffer buffer = String Buffer();
buffer. writeln ("<html>");
buffer. writeln ('<body>");
buffer. writeln ("<h1> Hello Dart</h1>");
buffer. writeln ("</ body>");
buffer. writeln ("</ html>);
print (buffer);
}
```

```
// <html>
   <body>
   <h1> Hello Dart </h1>
   </body>
   </ html>
```

String Concatenation Vs String Buffer Performance

```
void main() {
String result = "";
for(int i=0; i<10000; i++){
   result += '$i';
}
   print(result);
}
```

0 → 01 → 012 → 0123 →

result = result + '$i';

✓ 0 = '' + 0

✓ 01 = 0 + 1

✓ 012 = 01 + 2

✓ 0123 = 012 + 3

+=

```
void main() {
StringBuffer buffer = StringBuffer();
for(int i=0; i<10000; i++){
   buffer.write(i);
}
   print(buffer);
}
```

buffer

→ 0

→ 1

→ 2

→ 3

→ 4

→ 9999

0 1 2 3 4 . - —
