

Java Programming Language

String Concatenation

```
String name = "Rahul";  
String city = "Kolkata";
```

+ operator

```
void main() {  
    String firstName = "Rahul";  
    String lastName = "Das";  
    String fullName = firstName + " " +  
        lastName;  
    print(fullName); // Rahul Das  
}
```

```
void main() {  
    String firstName = "Rahul";  
    String lastName = "Das";  
    int age = 30;  
    String city = "Kolkata";  
    String hobby = "Photography";
```

```
String intro = firstName + " " + lastName  
    + "_is_" + age.toString() + " years old.  
    He lives in" + city + " and his hobby  
    is " + hobby + ".";  
    print(intro); // _____
```

```
print("$firstName $lastName is $age  
    years old. He lives in $city and  
    his hobby is $hobby.");
```

User Input:

```
import "dart:io";
```

```
void main () {
```

```
print print("Enter your name: ");
```

```
Stdout.write Stdout.write("Enter your name: ");
```

```
String? name = Stdin.readLineSync();
```

```
print(name);
```

```
}
```

```
import "dart:io";
```

```
void main () {
```

```
Stdout.write("Enter first number: ");
```

```
int? no1 = int.parse(Stdin.readLineSync()!);
```

```
Stdout.write("Enter second number: ");
```

```
int? no2 = int.parse(Stdin.readLineSync()!);
```

```
int sum = no1 + no2;
```

```
print("The sum of $no1 and $no2 is:  
$sum");
```

```
}
```
